

Box Model

PEER GRADING WARNING

Peer grading means others will be looking at your work. For this entire semester you should keep everything in your web pages G rated. If you offend someone with your words or with images and they report it to me, I will have no option but to relay the complaint to the appropriate department for evaluation. Jokes are fun but offending someone is not. So, to be safe, don't do anything that could possibly be taken the wrong way and get you into serious trouble.

Copy the HTML shown below into a file named exercise10.html and save it in your exercises folder.
Copy the style shown below into a file named exercise10.css and save it in your styles folder.
Copy the border.png file from AsULearn into your images directory.

Make the displayed html look exactly like the image below by **ONLY** changing your CSS file.

Use **ONLY** styles from chapter 13 in this assignment except for a couple of background-colors and a single text-align. You will have to figure out where you need the text align. The placement of background color should be obvious.

Don't add any more style selectors. Use the ones given. **You will receive a zero if you add other style selectors.**

For all the the spacing you should **ONLY** be changing the margins and padding. Don't use auto because it will make it harder to get the spacing correct.

Use **ONLY** named colors for this assignment.

Don't use the width on any box.

Pay attention to the padding and margin and the relationship of those styles to the background color and borders.

For p.fifth, use the styles given and simply play around with the sizes and percents shown in bold to get the correct border effect.

Get the border to look like the one below.

Note that there are wide margins on the left and right of the page, but not on the top and bottom.

Validate your CSS file.

Add a link to your exercise10.html in your main index page.

Upload your CSS file **AND** your border image file to AsULearn.

Make sure to complete your assigned peer review.

Save the following in exercise10.html

```
<!DOCTYPE html>
<html lang="en">
  <head>
    <meta charset="utf-8">
    <title>Box Model Exercise</title>
    <link rel="stylesheet" href='../styles/exercise10.css'
  </head>
  <body>

    <p class="first">If you want to center a box on the page (or center
      it inside the element that it sits in), you can set the left-
      margin and right-margin to auto.</p>

    <p class="second">In order to center a box on the page, you need to
      set the width for the box (otherwise it will take up the full
      width of the page. <strong>NOTE</strong> that the preceding
      sentence is only true if you are using auto as the margin. If you
      simply set the left and right margin to the same value, like 10em,
      the box will center and you DO NOT need a width. <strong>None of
      these paragraphs need a width</strong>.</p>

    <p class="third">Once you have specified the width of the box,
      setting the left and right margins to auto will make the browser
      put an equal gap on each side of the box. This centers the box on
      the page (or within the element that the box sits inside).</p>

    <p class="fourth">In order for this to work in older browsers
      particularly IE6), the element that the box sits inside should
      have a text-align property with its value set to center.</p>

    <p class="fifth">The text-align property is inherited by the child
      elements. You therefore also need to specify the text-align
      property on the centered box if you do not want the text inside to
      be centered.</p>

  </body>
</html>
```

Save the following in exercise10.css

```
body {
}
p.first {
}
p.second {
}
p.third {
}
p.fourth {
}
p.fifth {
  border: 1px solid;
  padding: 1px;
  border-image: url(../images/border.png) 1% round;
}
```

When you are done, make your window about the size of the example below and it should look about the same with the same margins and things lining up. It will change as you contract and expand your browser window. The top two paragraphs should be aligned. The ones below should maintain about the same level of indentation.

Full-screen should look like this.
