

CSS Fonts

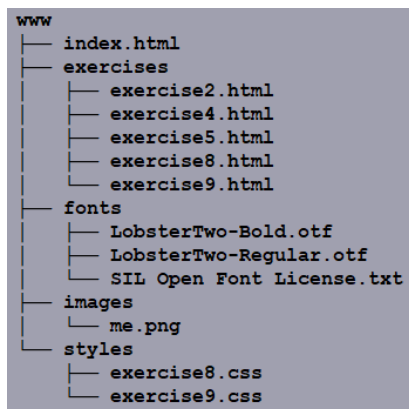

Put the following in a file named exercises9.html and put the file in your exercises directory.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <title>CSS Text Exercise</title>
  <link rel="stylesheet" href="../styles/exercise9.css">
</head>
<body>
  <p>A <span>beautiful <span>sunny </span></span>day!</p>
  <p>Let's <span go="go">go</span> play <span>outside</span>.</p>
</body>
</html>
```

- 1 Create a folder in your www directory named styles. Create a new text file named exercise9.css in the styles directory.

ALL THE FOLLOWING SHOULD ONLY MODIFY exercise9.css. DO NOT MODIFY exercise9.html IN ANY WAY OR YOU WILL RECEIVE A ZERO.

- 2 Create a folder in your www directory named fonts. Download the "LobsterTwo" regular and bold files from www.fontsquirrel.com and place the two otf font files in your fonts directory.

The directory structure should look like this in your www directory. I don't care about the SIL file in fonts.

- 3 Using the "LobsterTwo" fonts, apply the regular font to the first line and the bold font to the second line.

Make the sizes of the font as close as you can to the sizes shown here using either em or percentage.

A beautiful sunny day!

Let's go play outside.

- 4 Center both lines on the page.
- 5 Make the first sentence all uppercase without changing the second.
- 6 Make the text of the first line blue and the second red.
- 7 Create a gray shadow for both lines with an offset and blur to make it look something close to this image.

A BEAUTIFUL SUNNY DAY!

Let's go play outside.

- 8 Reduce the space between letters of the first line by 2 pixels without affecting the spacing of the second line.
- 9 Increase the spacing between words of the second line until the entire second line is at least as long as the first line.
- 10 Capitalize the first letter of "outside".
- 11 Make only the word "SUNNY" green.
- 12 Using the fact that it has an attribute named "go" (not the value of the attribute), draw a line through the word "go" on the web page. (See the end of Chapter 12)
- 13 Give the entire document a gray background.

When you have done all the above, your page should look like the following image. Note that it won't be quite this big because I zoomed in so you could see everything more clearly.

- 14 Validate your exercise9.css file. The W3C has a separate [CSS validator](#) service for styles.
- 15 When complete, upload exercise9.css to the workshop on AsULearn.
- 16 Add a link on your main index.html page in your www directory to exercise9.html.
- 17 Add a link on your main index.html page in your www directory to all the exercises in your exercises directory that you didn't already have linked.
- 18 I will be grading your personal web page, so make sure everything we covered in all exercises up to this one is on your web page on the student server or linked to by your web page.
- 19 Make sure to complete your assigned peer reviews.
